

## Supporting PST Removal and Monitoring

Your removal and monitoring projects are difficult enough without being complicated by a laboratory that misses turn-arounds, provides complex reports or adds extra fees to its billing.

Meridian Analytical Labs' understands the constraints you must work within and we tailor our services to accommodate. We provide the tools you need to efficiently sample your project's soil and water. We provide pre-preserved containers, coolers and disposable soil samplers as kits or in bulk.

We maintain NELAC Accreditation through the Kansas Department of Health and Environment (KDHE), and state certifications through Arkansas' ADEQ and Oklahoma's ODEQ.

Meridian specializes in high quality, cost effective soil and water testing for Kansas BTEX, LRH, MRH and HRH, as well as Oklahoma DRO, GRO, BTEX, lead and RCRA(8) metals.

Results are easy to understand and reported in PDF format for easy incorporation into compliance and remediation reports to OCC.

Meridian Analytical Laboratories, LLC provides full-service environmental analytical testing for a growing list environmental consultants, industries, municipalities and governmental agencies.

For more information on how we can reduce your cost and increase your productivity, please contact us.
